Albert Polman is one of the early pioneers of the research area of nanophotonics. His research group focuses on the realization of nanoscale metamaterials with tailored optical properties that do not exist in nature. He also designs and fabricates novel photovoltaic architectures with enhanced power conversion efficiency based on semiconductor and dielectric metasurfaces. Polman's group is the inventor of angle-resolved cathodoluminescence microscopy, a novel super-resolution microscopy technique that creates images with 10 nanometer resolution. The instrument is brought on the market by the start-up Delmic BV that Polman co-founded.
